

**Green Synthesis and Characterization of Zinc Oxide and Aluminum Oxide Nanoparticles;
Corrosion-Inhibition and Antimicrobial Study**

Taiwo Felicia OWOEYE

LCU/PG/002976

Being a PhD Thesis Submitted to the Department of Chemical Sciences, Faculty of Natural and Applied Sciences, Lead City University, Ibadan, Oyo State, Nigeria

**In Partial Fulfilment of the Requirements for the Award of Doctor of Philosophy Degree (PhD)
in Industrial Chemistry**

2025

Certification

This is to certify that Taiwo Felicia OWOEYE with matriculation number LCU/PG/002976 carried out this research work titled “Green Synthesis and Characterization of Zinc Oxide and Aluminum Oxide Nanoparticles: Corrosion-Inhibition and Antimicrobial Study in the Department of Chemical Sciences, Faculty of Natural and Applied Sciences, Lead City University Ibadan, Oyo state, for the award of Doctor of Philosophy Degree in Industrial Chemistry and that this has not been previously submitted.

Dedication

This research work is dedicated to God almighty, my husband, my twin sister, and my children.

Acknowledgement

I am thankful to God for assisting me in completing this thesis and guiding me through my program at Lead City University. Without God, I am nothing. I also extend my gratitude to Lead City's management, particularly the entire faculty and staff of the postgraduate College, and the department's postgraduate coordinators, Dr. Abayomi O. Bamisaye and Dr. Olumuyiwa O. Ogunlaja, for their availability and support during my program. I sincerely appreciate Covenant University for granting me permission to conduct my bench work in their chemistry laboratory.

Special thanks and sincere appreciation are owed to the following individuals for their contributions to the completion of this thesis. My supervisor, Dr. Abayomi O. Bamisaye, for his exceptional leadership and assistance throughout the study, I also want to express my gratitude to the Head of the Department,

Prof. McDonald O. Ighodaro, the entire staff of the Department of Chemical Sciences, Chemistry unit as well as the entire Faculty of Natural and Applied Sciences for their support over the years. I am grateful to God for my mentors, Prof. Olayinka O. Ajani of the Chemistry Department at Covenant University in Ota and Prof. Emetere Moses of the Physics Department at Bowen University, for their guidance throughout the years.

Furthermore, I would like to thank my family for their assistance and support during my research and study, especially my husband, Mr. Taiwo J. Owoeye, my wonderful children, and my amazing twin sister, Kehinde D. Akinlabu. Although the institutions and individuals mentioned above have contributed to this research work, I acknowledge that any inaccuracies discovered are my responsibility.

Abstract

The green technique for the synthesis of metal oxide Nanoparticles (NPs) is quick, simple, cost-effective, and environmentally friendly. This study aims to biogenically synthesize zinc oxide (ZnONP) and aluminum oxide (Al₂O₃NP) nanoparticles using *Adonida merrilli* (NM), *Washingtonia robusta* (M), *Cassia javanica* (C), and *Casuarina equisetifolia* (E) leaf extracts. The nanoparticles were characterized using UV-Vis spectroscopy, X-ray diffractometer (XRD), Fourier transform infrared spectroscopy (FTIR), Energy dispersive X-ray analyzer (EDX) and Scanning electron microscopy (SEM). The Corrosion inhibition studies were carried out in 0.5 M H₂SO₄ using gravimetric and potentiodynamic polarization methods. The samples were examined in an acidic media at varying concentration ranges of 500, 1000, 1500 and 2000 ppm. The antimicrobial study of the NPs was carried out on *Salmonella typhi* (Sa), *Escherichia coli* (Ec), *Staphylococcus aureus* (St), and *Pseudomonas aeruginosa* (Pa). The FT-IR analysis shows metal oxide absorption band values of 857 cm⁻¹ (E-ZnONP), 700 cm⁻¹ (C-ZnONP), 663 cm⁻¹ (M-ZnONP), 715 cm⁻¹ (NM-ZnONP). UV-Vis shows a plasmon resonance band value of 292 nm (C), 300 nm (C-ZnONP), 335 nm and 401nm (C-Al₂O₃Np), 290 nm (NM), 302 nm (NM-ZnONP), 336 nm and 401 nm (NM-Al₂O₃NP), 296 nm (M), 300 nm (M-ZnONP), 333 nm and 401 nm (M-Al₂O₃NP),

288 nm (E), 308 nm (E-ZnONP), 317 nm and 401 nm (E-Al₂O₃NP). The SEM micrographs and the XRD spectra show spherical crystalline nanoparticles with an average particle size of 73.82 nm (NM-ZnONP), 10.13 nm (C-Al₂O₃NP), 41.85 nm (C-ZnONP), 71.50 nm (M-ZnONP), 22.06 nm (E-ZnONP), 8.63 nm (E-Al₂O₃NP), 5.86 nm (NM Al₂O₃-NP), 8.68 nm (M-Al₂O₃NP). The recorded Zone of inhibition (ZI) and Minimum Inhibitory Concentration (MIC) values of E-ZnONP are 30.00 mm (Sa), 18.00 mm (Ec), 30.00 mm (St), and 30.00 mm (Pa), with MIC of 31.25 mg/mL (Sa), 0.00 mg/mL (Ec), 31.25 mg/mL (St), 31.25 mg/mL (Pa). C-ZnONP, ZI of 32.00 mm (Sa), 19.00 mm (Ec), 34.00 mm (St), 40.00 mm (Pa), and MIC of 31.25 mg/mL (Sa), 0.00 mg/mL (Ec), 31.25 mg/mL (St), 31.25 mg/mL (Pa), M-ZnONP, ZI of 36.00 mm (Sa), 30.00 mm (Ec), 36.00 mm (St), 38.00 mm (Pa), with MIC of 31.25 mg/mL (Sa), 250.00 mg/mL (Ec), 125.00 mg/mL (St), 62.50 mg/mL (Pa). NM-ZnONP, ZI of 30.00 mm (Sa), 32.00 mm (Ec), 40.00 mm (St), 36.00 mm (Pa) and MIC of 7.81 mg/mL (Sa), 7.81 mg/mL (Ec), 1.95 mg/mL (St), 3.90 mg/mL (Pa). C-Al₂O₃NP, ZI of 0.00 mm (Sa), 22.00 mm (Ec), 21.00 mm (St), 20.00 mm (Pa)], with zero MIC, while M-Al₂O₃NP recorded ZI of 0.00 mm (Sa), 19.00 mm (Ec), 25.00 mm (St), 22.00 mm (Pa) with Zero MIC values. The optimum recorded corrosion inhibitory efficiency values are 92.93% (500 ppm), 81.49% (1000 ppm), 82.99% (1500 ppm), 88.84% (2000 ppm) for E-ZnONP, 61.41% for M-Al₂O₃NP, 86.63% (500 ppm) for C extracts in 0.5 M H₂SO₄. E-ZnONP, C-ZnONP, M-ZnONP, and NM-ZnONP. E-ZnONP showed optimal corrosion resistance, while NM-ZnONP exhibited superior antimicrobial activity with low MIC values. The findings of this study showed that the biogenically synthesized nanoparticles possessed excellent therapeutic properties and were also viable for corrosion mitigation.

Keywords: Green Synthesis, Corrosion Inhibition, Plant extract, Metal-Oxide Nanoparticles, Surface Chemistry.
